

Internship Cohort

Full Stack Development Task List

About Us

- Sysslan IT Solutions is a leading technology firm recognized for its proficiency in the rapidly evolving domains of cloud computing, blockchain, artificial intelligence (AI), and machine learning (ML).
- The company is dedicated to delivering high-impact projects and customized solutions that address the dynamic requirements of modern businesses.
- Sysslan IT Solutions provides a comprehensive range of products and services, including scalable cloud computing platforms, cutting-edge blockchain solutions, intelligent AI systems, and advanced ML algorithms, designed to empower organizations and drive innovation.

Sysslan IT Solutions

Instructions

- Update your LinkedIn profile to highlight your accomplishments, such as offer letters or internship certificates from Sysslan IT Solutions. Mention and tag Sysslan IT Solutions in your posts. Use relevant hashtags like **#SysslanITSolutions** **#SysslanExperience** **#FutureWithSysslan** to showcase your professional association.
- Ensure that all work is original and avoid plagiarism or code duplication, as such violations may result in termination of the internship and impact future opportunities with Sysslan IT Solutions.
- Create a video presentation of your completed tasks and share it on LinkedIn. Tag Sysslan IT Solutions and use hashtags like **#SysslanInnovation** **#SysslanITSolutions** **#SysslanProjects** to engage with our professional community.

Sysslan IT Solutions

SUBMISSION

- **Create a professional video highlighting your internship projects and accomplishments.**
- **Share the video on LinkedIn to demonstrate your work and build credibility with your professional network. Make sure to tag Syssslان IT Solutions in your post so the company is notified of your achievements.**
- **A submission form will be provided later. In the meantime, continue working on your tasks and maintain separate files for each level of work.**
- **When posting the video on LinkedIn, use the following hashtags to increase visibility and engagement:**
 - **#SyssslانITSolutions #Syssslان #SyssslانProjects**
- **You can also include additional hashtags relevant to your specific internship domain to further showcase your expertise.**

Title: Full Stack Event Feedback Management System

Project Description

This project focuses on building a full-stack web application that collects and manages event feedback. The system allows users to submit feedback for events through a frontend interface, stores the feedback in a database using a backend server, and displays submitted feedback for review. The project introduces fundamental concepts of frontend development, backend APIs, database operations, and full-stack integration.

Objectives:

- **Design user-friendly frontend pages**
- **Build backend routes to handle requests**
- **Store and retrieve feedback using a database**
- **Connect frontend and backend seamlessly**
- **Test and finalize a complete feedback workflow**

Level 1: Frontend Pages

Description:

Create the basic frontend structure and pages for the feedback system.

Tasks:

- Task 1: Create a homepage with a website title and a short description explaining event feedback collection
- Task 2: Add a navigation menu with links to Home, Events, and Feedback
- Task 3: Create an Events page listing sample events
- Task 4: Create a Feedback page with a basic feedback submission form

Skills Gained:

HTML structure, navigation design, form creation, frontend layout planning

Level 2: Backend Setup

Description:

Set up a simple backend server to handle requests and feedback submissions.

Tasks:

- Task 1: Set up a backend server using a suitable technology (e.g., Node.js / Flask)
- Task 2: Create a route that displays a welcome message from the backend
- Task 3: Create a route to receive feedback form data
- Task 4: Display submitted feedback on a new page

Skills Gained:

Backend fundamentals, routing, request handling, server setup

Level 3: Database Basics

Description:

Introduce database storage for saving and retrieving feedback data.

Tasks:

- Task 1: Set up a simple database
- Task 2: Create a table or collection to store feedback details
- Task 3: Save feedback form data into the database
- Task 4: Retrieve and display all feedback in a list format

Skills Gained:

Database basics, CRUD operations, data storage, backend-database integration

Level 4: Frontend & Backend Connection

Description:

Integrate frontend forms with backend services to create a complete data flow.

Tasks:

- Task 1: Connect the feedback form to the backend API
- Task 2: Show a success message after feedback submission
- Task 3: Fetch feedback data from the backend and display it on the frontend
- Task 4: Implement basic validation (e.g., empty fields)

Skills Gained:

Frontend-backend integration, API communication, validation handling

Sysslan IT Solutions

Level 5: Final Touch & Review

Description:

Enhance the UI, verify data flow, and finalize the project for delivery.

Tasks:

- Task 1: Improve basic styling for better readability
- Task 2: Ensure all navigation links function correctly
- Task 3: Verify feedback data is stored and displayed accurately
- Task 4: Test the complete feedback flow from submission to display

Skills Gained:

UI improvement, debugging, testing, end-to-end project review
